Software Requirements Specification (SRS)

1. Introduction

1.1 Purpose
This document provides a detailed Software Requirements Specification (SRS) for Smart Track, a retail store cash flow and inventory management web application.

1.2 Scope
Smart Track is designed for local retail businesses and micro-enterprises (such as mini-marts and sari-sari stores). The platform enables store managers to track real-time income and expenses, monitor physical cash and e-wallet balances, manage inventory assets, record customer store credit ("Utang"), and view sales performance analytics.

2. Overall Description

2.1 System Overview
The user interface consists of a persistent left navigation sidebar and a main dashboard workspace.

Sidebar Navigation:

- Store Switcher: Select active store branch (e.g., Santos Mini Mart, Quezon City).
- Dashboard: Overview page (currently active view).
- Cashflow (In/Out): Detailed cash inflow and outflow tracking.
- Inventory & Assets: Product and stock management.
- Store Credit (Utang): Ledger for customer credit tracking.
- Reports: Advanced sales and financial analytics.
- Settings: Account, branch, and system configuration.
- Main Workspace Widgets:
- Summary Cards (Today's Net Cash Flow, Cash on Hand, Total Inventory Asset Value)
- Daily Cash Flow Bar Chart (Income vs. Expenses with date range filters)
- Recent Transactions Table

3. Functional Requirements

3.1 Store Management

- FR-1.1: The system shall support multiple store locations under a single user account (e.g., Santos Mini Mart, Quezon City).
- FR-1.2: The system shall display the active store name in the navigation bar and breadcrumb trail (Santos Mini Mart / Dashboard).
- 3.2 Metrics & Overview Cards
- FR-2.1 (Net Cashflow): The system shall compute and display Today's Net Cashflow calculated as:

$$NetCashflow = Income - Expenses$$

Example: $₱12,480.00(Income) - ₱3,840.00(Expenses) = ₱8,640.00.$
Display percentage growth indicator relative to the previous equivalent period (e.g., +12.5%).
FR-2.2 (Cash on Hand): The system shall track total liquidity across cash channels:

$$CashonHand = PhysicalCash + E - WalletBalance$$

Example: $₱18,500.00(Cash) + ₱5,820.00(E - wallet) = ₱24,320.00.$
FR-2.3 (Inventory Asset Value): The system shall calculate total inventory value at cost price alongside the count of active SKUs/products (e.g., ₱86,450.00 across 248 active products).

3.3 Cashflow Analytics & Charting

- FR-3.1: The system shall display a dual-bar chart visualizing Daily Income vs. Daily Expenses.
- FR-3.2: The chart shall support selectable time period filters (e.g., Last 7 days).
- FR-3.3: The chart view shall display aggregate totals for the selected period (e.g., Income: ₱12,480.00, Expenses: ₱3,840.00).
- 3.4 Transaction Logging
- FR-4.1: The system shall maintain a tabular log of recent transactions with fields:
- Date & Time: Timestamp of entry (e.g., Oct 5, 2026 at 2:42 PM)
- Type: Status badge indicating Income or Expense
- Category: Classification (e.g., Retail sale, Restocking, Utang paid)
- Payment Method: Channel used (Cash, GCash, etc.)
- Description: Details on items or customer names (e.g., Rice 2 kg, eggs..., Credit payment - Liza...)

- FR-4.2: The dashboard shall display a real-time counter of total transactions recorded for the current day (e.g., 34 today).

4. Non-Functional Requirements

4.1 Interface & Usability

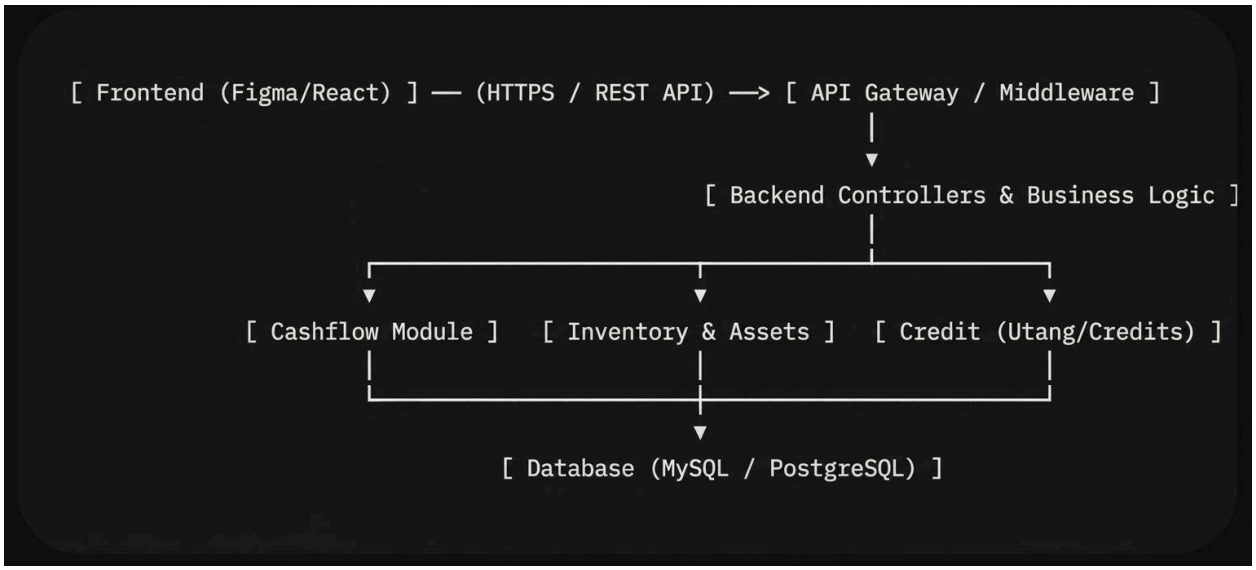

- Localization: Default currency representation in Philippine Peso (₱).
- Terminology: Incorporate local retail terminology (e.g., Utang for store credit).
- Color Coding: Visual distinctions using color codes:
- Green / Teal: Positive cash flow / Income / Growth
- Orange / Red: Expenses / Cash outflow

4.2 Data Integrity

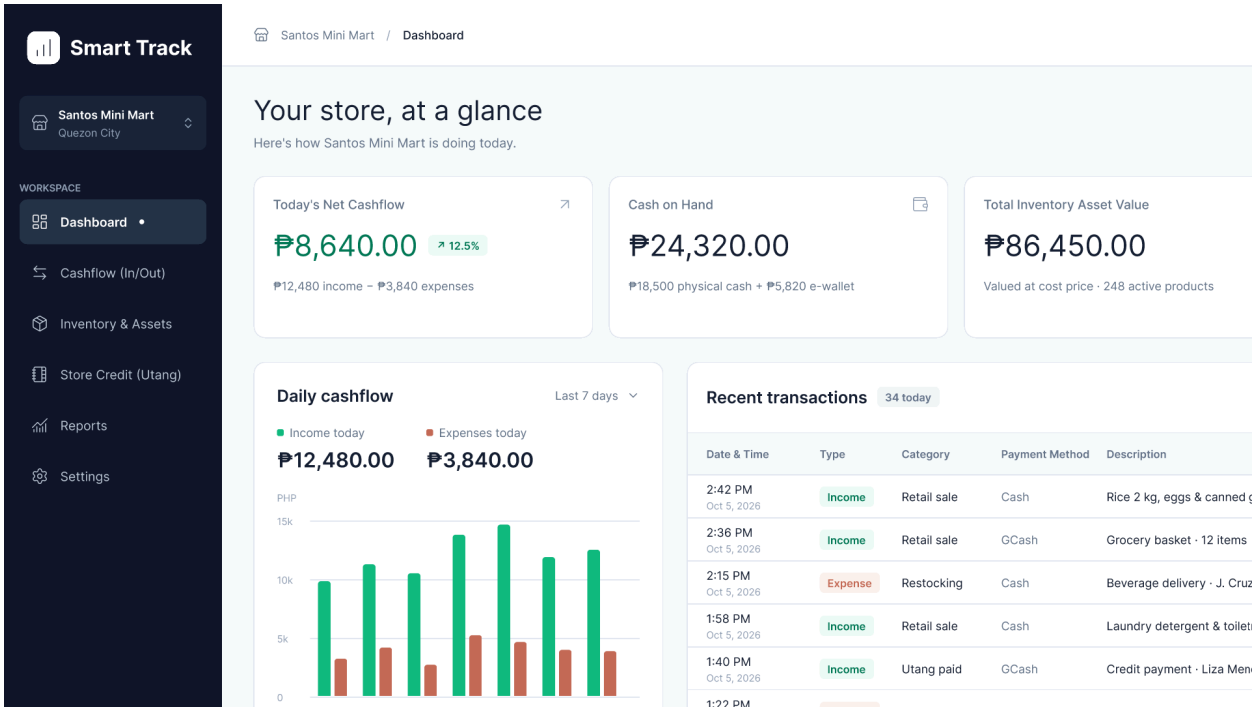

- All transaction calculations (Net Cash Flow, Total Cash on Hand) must update dynamically upon recording new transactions.

PROJECT DEVELOPMENT AGREEMENT

Project Title:SmartTrack: Sales, Inventory and Debt Management System for Store Assistants
Date: October 6, 2026

1. THE PARTIES

This agreement is officially entered into by and between:

- The Development Team (Proponents):
  - Andrea Sescon
  - Suraya Adso
  - Keith Caballes
  - Angelica Indig

- **The Client:**
  - Sari-Sari Store Management / Owner

2. PURPOSE & PROJECT OBJECTIVE

The purpose of this contract is to establish the development of the SmartTrack System. Based on the client's needs, the system aims to solve the difficulties of manual notebook tracking by introducing a secure website that automates sales recording, income tracking, change calculation, and customer debt management.

3. SCOPE OF WORK & CORE FEATURES

The Development Team agrees to build and configure a web application featuring the following modules based on the system's approved database architecture:

- Sales & Transaction Module: Electronic transaction logging, automated item subtotaling, and real-time calculation of exact customer change to prevent cash shortfalls.
- Inventory Status Module: Digital tracking of product details, current stock quantities, and visual indicators for items reaching their reorder level.
- Debt Management Module: A dedicated tracking system to record customer names, individual debt balances, payment histories, and automated payment status updates (e.g., Unpaid, Partially Paid, Paid)

- Daily Income Reports: Auto-generated summaries of daily store earnings to match actual cash with recorded digital sales at the end of each day.
- Store Assistant Authentication: Secure login profiles (Username and Password) to ensure only authorized staff can record transactions.

4. PROJECT DELIVERABLES

The Proponents will turn over the following deliverables to the Client upon project completion:

- System Requirements Specification (SRS): Detailed documentation of all system rules and capabilities.
- Database & System Architecture: Fully structured backend implementation based on the approved Entity-Relationship Diagram (ERD).
- User Interface Figma Mockups: Visual blueprints and design layouts of the website screens.
- Deployed Web Application: The functional, ready-to-use software platform accessible on the store's devices.

5. CLIENT COOPERATION & RESPONSIBILITIES

To ensure successful system implementation, the Client agrees to provide:

- An accurate initial list of store products, base prices, and category details.
- Timely feedback on user interface designs and prototype testing.

6. ACCEPTANCE AND SIGN-OFF

By signing below, both parties acknowledge and accept the scope of work, features, and milestones outlined in this agreement.
